CONTENTS

I. Sets

1. Basic concepts	15
1.1. The notion of a set	15
1.2. Notation of sets	15
1.3. Further notions	16
1.4. Subsets and supersets	16
1.5. The sum (union) of sets	17
1.6. The intersection of sets. Incident and disjoint sets	18
1.7. Sequences	18
1.8. The Cartesian product of sets. Cartesian powers	20
1.9. α -grade structures	20
1.10. Exercises	21
2. Decompositions (partitions) in sets	21
2.1. Decompositions in a set	21
2.2. Decompositions on a set	21
2.3. Closures and intersections	22
2.4. Coverings and refinements of a decomposition	23
2.5. Chains of decompositions	24
2.6. Exercises	26
3. Decompositions on sets	27
3.1. Bindings in decompositions	27
3.2. Coverings and refinements of decompositions on sets	28
3.3. Common coverings and common refinements of two decompositions	29
3.4. The least common covering of two decompositions	30
3.5. The greatest common refinement of two decompositions	32
3.6. Relations between the least common covering and the greatest common refinement of two decompositions	34
3.7. Exercises	34
4. Special decompositions	34
4.1. Semi-coupled (loosely coupled) and coupled decompositions	35
4.2. Adjoint decompositions	37

4.3.	Modular decompositions	39
4.4.	Exercises	41
5.	Complementary (commuting) decompositions	41
5.1.	The notion of complementary (commuting) decompositions	41
5.2.	Characteristic properties	42
5.3.	Further properties	43
5.4.	Modularity	44
5.5.	Local properties	45
5.6.	Exercises	46
6.	Mappings of sets	46
6.1.	Mappings into a set	46
6.2.	Mappings onto a set	47
6.3.	Simple (one-to-one) mappings	48
6.4.	Inverse mappings. Equivalent sets. Ordered finite sets	48
6.5.	The decompositions of sets, corresponding to mappings	49
6.6.	Mappings of sets into and onto themselves	50
6.7.	Composition of mappings	50
6.8.	The equivalence theorems	51
6.9.	Mappings of sequences and α -grade structures	52
6.10.	Exercises	55
7.	Mappings of decompositions	56
7.1.	Extended mappings	57
7.2.	Theorems on mappings of decompositions	58
7.3.	Exercises	59
8.	Permutations	60
8.1.	Definition	60
8.2.	Examples of permutations	61
8.3.	The number of permutations	63
8.4.	Properties of permutations	63
8.5.	The determination of permutations by pure cyclic permutations	66
8.6.	The method of determining the pure cyclic permutations forming a given permutation	67
8.7.	Composition of permutations	68
8.8.	Exercises	69
9.	General (multiple-valued) mappings	70
9.1.	Basic notions and properties	70
9.2.	Congruences	71
9.3.	Symmetric congruences	72
9.4.	Antisymmetric congruences	73
9.5.	Exercises	74
10.	Series of decompositions of sets	74
10.1.	Basic concepts	75
10.2.	Local chains	76
10.3.	Refinements of series of decompositions	76

10.4. Manifolds of local chains	77
10.5. Chain-equivalent series of decompositions	78
10.6. Semi-joint (loosely joint) and joint series of decompositions	79
10.7. Modular series of decompositions	80
10.8. Complementary series of decompositions	84
10.9. Example of co-basally joint series of decompositions	85
10.10. Connection with the theory of mappings of sets onto sets of finite sequences	85
10.11. Some remarks on the use of the preceding theory in scientific classifications	88
10.12. Exercises	89

II. Groupoids

11. Multiplication in sets	90
11.1. Basic concepts	90
11.2. Commutative (Abelian) multiplication	91
11.3. Examples of multiplication in a set	91
11.4. Multiplication tables	91
11.5. Exercises	93
12. Basic notions relative to groupoids	94
12.1. Definition	94
12.2. Further notions. The groupoids \mathfrak{Z} , \mathfrak{Z}_n , \mathfrak{E}_n	94
12.3. Interchangeable subsets	95
12.4. Subgroupoids, supergroupoids, ideals	96
12.5. Further notions	96
12.6. The intersection of groupoids	97
12.7. The product of a finite sequence of elements	97
12.8. The product of a finite sequence of subsets	99
12.9. Exercises	100
13. Homomorphic mappings (deformations) of groupoids	101
13.1. Definition	101
13.2. Example of a deformation	101
13.3. Properties of deformations	102
13.4. Isomorphic mappings	102
13.5. Operators, meromorphic and automorphic mappings	103
13.6. Exercises	104
14. Generating decompositions	104
14.1. Basic concepts	104
14.2. Deformation decompositions	105
14.3. Generating decompositions in groupoids	105
14.4. Generating decompositions on groupoids	107
14.5. Exercises	108
15. Factoroids	109
15.1. Basic concepts	109
15.2. Example of a factoroid	110

12 Contents

15.3. Factoroids in groupoids 110
15.4. Factoroids on groupoids 113
15.5. α -grade groupoidal structures 117
15.6. Exercises 118

16. Deformations of factoroids 118
16.1. The isomorphism theorems for groupoids 118
16.2. Extended deformations 120
16.3. Deformations of sequences of groupoids and α -grade groupoidal structures 122
16.4. Exercises 125

17. Series of factoroids 126
17.1. Basic concepts 126
17.2. Local chains 126
17.3. The groupoid of local chains 127
17.4. Chain-isomorphic series of factoroids 128
17.5. Semi-joint and joint series of factoroids 129
17.6. Modular and complementary series of factoroids 130
17.7. Exercises 131

18. Remarkable kinds of groupoids 131
18.1. Associative groupoids (semigroups) 132
18.2. Groupoids with cancellation laws 135
18.3. Groupoids with division 136
18.4. Groupoids with a unit element 136
18.5. Further remarkable groupoids. Groups 137
18.6. Lattices 140
18.7. Exercises 144

III. Groups

19. Basic concepts relative to groups 146
19.1. Axioms of a group 146
19.2. Inverse elements. Inversion 146
19.3. Powers of elements 148
19.4. Subgroups and supergroups 149
19.5. The intersection and the product of subgroups 150
19.6. Comments on the multiplication tables of finite groups 151
19.7. Exercises 153

20. Cosets of subgroups 155
20.1. Definition 155
20.2. Properties of the left (right) cosets 155
20.3. Exercises 157

21. Decompositions generated by subgroups 157
21.1. Left and right decompositions 157
21.2. Intersections and closures in connection with left decompositions 158

21.3.	Coverings and refinements of the left decompositions	160
21.4.	The greatest common refinement of two left decompositions	161
21.5.	The least common covering of two left decompositions	161
21.6.	Complementary left decompositions	162
21.7.	Relations between the left and the right decompositions	162
21.8.	Exercises	163
22.	Consequences of the properties of decompositions generated by subgroups	164
22.1.	Lagrange's theorem	164
22.2.	Relations between interchangeable subgroups	165
22.3.	Modular lattices of subgroups and of decompositions generated by subgroups	167
22.4.	Exercises	169
23.	Special decompositions of groups, generated by subgroups	169
23.1.	Semi-coupled and coupled left decompositions	169
23.2.	The general five-group theorem	170
23.3.	Adjoint left decompositions	172
23.4.	Series of subgroups	173
23.5.	Exercises	179
24.	Invariant (normal) subgroups	180
24.1.	Definition	180
24.2.	Basic properties of invariant subgroups	180
24.3.	Generating decompositions of groups	181
24.4.	Properties of the generating decompositions of a group	183
24.5.	Further properties of invariant subgroups	184
24.6.	Series of invariant subgroups	186
24.7.	Exercises	186
25.	Factor groups	187
25.1.	Definition	187
25.2.	Factoroids on a group	188
25.3.	Properties of factor groups	188
25.4.	Factor groups in groups	189
25.5.	Further properties of factor groups	190
25.6.	Exercises	191
26.	Deformations and the isomorphism theorems for groups	192
26.1.	Deformations of groups	192
26.2.	Cayley's theorem and the realization of abstract groups	193
26.3.	The isomorphism theorems for groups	194
26.4.	Deformations of factor groups	196
26.5.	Exercises	197
27.	Cyclic groups	198
27.1.	Definition	198
27.2.	The order of a cyclic group	198
27.3.	Subgroups of cyclic groups	199
27.4.	Generators	199

14	Contents	
27.5.	Determination of all cyclic groups	200
27.6.	Fermat's theorem for groups	201
27.7.	The generating of translations on finite groups by pure cyclic permutations	202
27.8.	Exercises	202
	Bibliography	203
	Index	211
