Contents

Preface 7

Stanislav Bartoň, Tomáš Krumpholc
Driver's influence on kinematics of articulated bus rear axle 9

Daniela Bímová, Dana Černá, Václav Finěk
Wavelet bases for the biharmonic problem 15

Marek Brandner, Jiří Egermaier, Hana Kopincová, Josef Rosenberg
Numerical modelling of flow in lower urinary tract using high-resolution methods 21

Dana Černá, Václav Finěk, Martina Šimůnková
A quadratic spline-wavelet basis on the interval 29

Marta Čertíková, Jakub Šístek, Pavel Burda
On selection of interface weights in domain decomposition methods 35

Jan Chleboun
On the optimal setting of the *hp*-version of the finite element method 45

Pavol Chocholatý
Integro-differential equations with time-varying delay 51

Josef Dalík
Superapproximation of the partial derivatives in the space of linear triangular and bilinear quadrilateral finite elements 57

Ján Eliaš, Jan Zítko
Approximate polynomial GCD 63

Václav Finěk, Martina Šimůnková
Parallel implementation of wavelet-Galerkin method 69

Cyril Fischer
Massive parallel implementation of ODE solvers 75

Milan Hanuš
A new perspective on some approximations used in neutron transport modeling 81

Martin Horák, Milan Jirásek
An extension of small-strain models to the large-strain range based on an additive decomposition of a logarithmic strain 88

Jiří Hozman
Valuing barrier options using the adaptive discontinuous Galerkin method 94

Radek Kaňa, Ctirad Matonoha, Štěpán Papáček, Jindřich Soukup
On estimation of diffusion coefficient based on spatio-temporal FRAP images: An inverse ill-posed problem 100

Radka Keslerová, Karel Kozel
Numerical simulation of generalized Newtonian and Oldroyd-B fluids flow 112

Jiřina Královcová, Ladislav Lukšan, Jaroslav Mlýnek
Heat exposure optimization applied to moulding process in the automotive industry 118

Jiří Krček, Jaroslav Vlček, Arnošt Žídek
Tangential fields in optical diffraction problems 124

Lukáš Krupička, Radek Štefan, Michal Beneš
Coupled heat transport and Darcian water flow in freezing soils 130

Václav Kučera
Error estimates for nonlinear convective problems in the finite element method 136

Jaroslav Mlýnek, Radek Srb
The optimization of heat radiation intensity 142

Vratislava Mošová
Shape functions and wavelets – tools of numerical approximation 149

Lukáš Pospíšil
An optimal algorithm with Barzilai-Borwein steplength and superrelaxation for QPQC problem 155

Jan Přikryl
Graphics card as a cheap supercomputer 162

Ivana Pultarová
Fourier analysis of iterative aggregation-disaggregation methods for nearly circulant stochastic matrices 168

Petr Salač
Optimization of plunger cavity 174

Karel Segeth
Smooth approximation of data with applications to interpolating and smoothing 181

Jiří Vala
Numerical aspects of the identification of thermal characteristics using the hot-wire method 187

Tomáš Vejchodský
Guaranteed and fully computable two-sided bounds of Friedrichs' constant 195

Miloslav Vlasák, Václav Kučera
A priori diffusion-uniform error estimates for singularly perturbed problems: midpoint-DG discretization 202

Jan Vlček, Ladislav Lukšan
Modifications of the limited-memory BFGS method based on the idea of conjugate directions 209

Jan Zítko, Ján Eliaš
Calculation of the greatest common divisor of perturbed polynomials 215

List of participants 223
